## **Functions, Limits, Derivatives**

## **Learning Outcomes**:

Identify properties of elementary functions (formed by composition of power, exponential, logarithmic, and trigonometric functions and their inverses).

#### **Functions**

#### **Definition of a Function**

A **function** f is a rule that assigns to each element x in a set D exactly one element, called f(x), in a set E.

Set *D* is called the \_\_\_\_\_ of the function.

Set E is called the \_\_\_\_\_ of the function.

#### **Definition of a Function**

A **function** f is a rule that assigns to each element x in a set D exactly one element, called f(x), in a set E.

Set *D* is called the domain of the function.

Set E is called the range of the function.
